

My World of Science

# SOUND AND HEARING

# What Is Sound?

Sound is what we hear when something makes a noise. This dog is barking. People near it can hear the sounds it makes.

Sometimes you can hear many noises at the same time. The people in this street can hear many sounds, such as the sound of cars and people talking.

# Making Sounds

There are many different ways to make sounds. This father is shaking a rattle to make a noise. Banging, scraping, and rubbing also make sounds.

## SOUND AND HEARING

- What is sound?
- How do we talk?
- Can sound travel around corners?

Read **My World of Science: Sound and Hearing** to find out! Learn how sounds are made, how you can hear them, how people use them, and where sounds can travel.

Each book in the **My World of Science** series explains science that you see in the world around you and use every day. How does a lightbulb work? Why are the soles of your shoes rough? How do you hear sounds? How does a magnet keep your refrigerator door closed? Why do some things sink and other things float? **My World of Science** has the answers to these questions and more.

Titles in the series:

Color

Forces and Motion

Hot and Cold

Light and Dark

Magnets

Materials

Solids, Liquids, and Gases

Sound and Hearing

Using Electricity

Water
